<p>PRODUKTION</p> <p>Hvor stor en procentdel af verdens samlede CO2 udledninger pr år, udleder den globale mode- og tekstilindustri?</p> <p>Svar: Op til 10% Afhængigt af kilden</p> <p>Forurening er ikke blot CO2 fra produktion, men kan også dække over anvendt kemi, erosion af biologiske systemer og udpining af jorden.</p> <p>Mode- og tekstilindustrien belaster klimaet, og der angives forskellige CO2-belastninger fra 2 og op til 10%. Nogle kilder anser industrien for at være den anden mest forurenende industri, mens andre har den på en fjerde- eller femteplads.</p>	<p>PRODUCTION</p> <p>What percentage of the world's total annual CO2 emissions does the global fashion and textile industry emit?</p> <p>Answer: Up to 10% Depending on the source</p> <p>Pollution is not just CO2 from production, but can also cover applied chemistry, erosion of biological systems and soil depletion.</p> <p>The fashion and textile industry has an impact on the climate, and different CO2 emissions are reported, ranging from 2% to 10%. Some sources consider the industry to be the second most polluting industry, while others have it in fourth or fifth place.</p>
