<p><b>PRODUKTION</b></p> <p>Hvor mange tons tekstilaffald genererer den globale tekstil- og modeindustri pr år?</p> <p>Svar: 50-100 mio. tons Afhængigt af kilden</p> <p>Det estimeres at den globale tekstil- og modeindustri genererer 92 millioner tons affald pr år. Der er enormt meget tekstil, der ender som affaldsbjerge eller brændes af. Nogle kilder estimerer, at det gælder over 80% af alle tekstiler. Det skaber en enorm miljøbelastning, og det understøtter social ulighed i det globale syd, da meget af affaldet ender der. Dette gælder også tøj som returneres til virksomheder.</p>	<p><b>PRODUCTION</b></p> <p>How many tons of textile waste does the global textile and fashion industry generate per year?</p> <p>Answer: 50-100 million tons Depending on the source</p> <p>It is estimated that the global textile and fashion industry generates 92 million tons of waste per year. There are an enormous number of textiles that end up in landfills or are burned. Some sources estimate that this applies to over 80% of all textiles. This creates an enormous environmental impact, and it supports social inequality in the global south, as much of the waste ends up there. This also applies to clothing that is returned to companies.</p>
