<p>BÆREDYGTIGHED</p> <p>Hvor mange procent tekstilaffald, ender på lossepladser eller forbrændes på verdensplan?</p> <p>Svar: 72% Afhængigt af kilden</p> <p>Fast Fashion-tøj produceres med henblik på, at der sælges mest muligt, hurtigst muligt.</p> <p>For at holde økonomien i gang og skabe vækst for producenterne er meget af tøjet fremstillet så det bliver hurtigt forældet. Det går af mode, eller det går simpelthen i stykker. Det vil sige, at meget af tøjet ender som affald efter få ganges brug, og værdifuldt materiale går tabt.</p>	<p>SUSTAINABILITY</p> <p>What percentage of the world's textile waste ends up in landfills or is incinerated?</p> <p>Answer: 72% Depending on the source</p> <p>Fast Fashion clothing is produced with the aim of selling as much as possible, as quickly as possible.</p> <p>To keep the economy going and create growth for manufacturers, much of the clothing is made so that it becomes obsolete quickly. It goes out of style, or it simply breaks. This means that much of the clothing ends up as waste after a few uses, and valuable material is lost.</p>
